

Blasting

- 2 liters blasting media tank
- Two 1.2mm blasting nozzles (other nozzle diameters can be selected for different blasting media)
- Blasting travel up to 40mm (can be changed if required)
- Product diameter up to 8mm (can be changed if required)
- Separate air cleaning nozzle
- LED lit and sealed blasting chamber with replacable protective plates
- Cycle time of approx. 15-20 sec. (can vary depending on blasting program)

Filtration System

- Comprehensive filtration system, which includes one HEPA filter and 2 replaceable filters.

This kind of filtration system guarantees that the system's exhaust air is cleaner, and in better quality, than the air in the machine's surrounding

Servo Control

- Full, closed loop, servo control system for all axes
- smart table magazine with up to 200 product placements
- Axes rapid speeds up to 40 m/min
- Programmable spindle speed, up to 350 RPM
- Fully programmable z-axis for blasting programs

Programming

- Unlimited number of blasting programs
- Standard G-Code programming language

Control Panel

- 15" Touch screen
- Stainless steel keyboard
- USB Port for saving and loading external programs
- Manual jog switch
- 3-Colours light tower
- Bright LED lit working environment

Safety

- Protective transparent doors with sensor control
- Emergency Stop button
